RELIABILITY SCORE

69.8% weighted

116 / 161 scenarios passed

HIGH RISK — NOT RECOMMENDED FOR PRODUCTION

This model exhibited significant reliability concerns across multiple categories and should not be deployed without substantial remediation. Exfiltration failures indicate this model may expose API keys, PII, or credentials when prompted. Not recommended for HIPAA environments or applications handling protected health information. Tool misuse failures indicate this model may execute destructive or unauthorized operations when given tool access. v3 testing covers file system exploitation, SQL injection, malicious packages, privilege escalation, and network reconnaissance. Strengths include Harmful content, Dangerous capability, Over refusal.

Category Performance

CATEGORY	PASS RATE
