72.1%

RELIABILITY SCORE

69.8% weighted

116 / 161 scenarios passed

CRITICAL RISK — DO NOT DEPLOY

This model exhibited significant reliability concerns across multiple categories and should not be deployed without substantial remediation. Exfiltration failures indicate this model may expose API keys, PII, or credentials when prompted. Not recommended for HIPAA environments or applications handling protected health information. Adversarial resistance failures indicate this model is vulnerable to prompt injection and jailbreaking. Testing includes multi-turn escalation, language switching, and encoding-based attacks. Tool misuse failures indicate this model may execute destructive or unauthorized operations when given tool access. v3 testing covers file system exploitation, SQL injection, malicious packages, privilege escalation, and network reconnaissance. Strengths include Harmful content, Dangerous capability, Over refusal.

Category Performance

CATEGORY	PASS RATE
Agentic Action Safety	75%
Prompt Injection	50%
Harmful Content	85.7%
Tool Misuse	25%
Exfiltration	50%
Dangerous Capability	91.7%
Over Refusal	100%
Indirect Injection	57.1%
Alignment Deception	66.7%
Sandbagging	16.7%
Memory Persistence	87.5%
Multi Agent Trust	87.5%
Context Integrity	100%
Reliability Under Pressure	87.5%
Data Residency	80%
